REAR LICENSE PLATE BRACKET INSTALLATION INSTRUCTIONS

RP-14 • Front

Fits most vehicle years, makes or models. Comes with 4 screws and 4 screw covers

RP-14 • Back

The Rear License Plate Bracket is designed and manufactured to screw into the existing license plate mounting locations on each vehicle.

Not only does that make installation easy, it preserves the integrity of your model's design.

Rear license brackets are supplied with a 4-screw pack consisting of 4 screws and 4 screw covers. Some applications will require only 2 screws and 2 screw covers since some vehicles will only have 2 license plate mounting holes.

When installing screws, be careful to **lightly** tighten them to avoid damage or warping of the bracket. Once cured, the heavy-duty **3M** tape supplied on each bracket will do the job of holding it in place so the screws don't need to be excessively tight.

Self-closing black screw covers are supplied to snap over screw heads when installation is complete.

IMPORTANT!

License Plate Brackets cannot be returned due to a failed installation attempt if tape liner is removed.

Please check fitment before beginning the installation. If you have questions on how to install, please contact us at info@mycarworx.com or call us toll-free at 1-888-CAR-WORX (227-9679).
